

the Develop Course

{CODENATION}

An introduction to CSS

{CODENATION}

First things first

Create a **function** that takes one parameter (fruits) and checks whether it is bananas **or** pears.

If it is then log to the console a template string which says "awesome cheers, I like (fruits)" **else** log to the console "No thanks, I don't like (fruits)"

Learning Objectives

To be familiar with some common properties in CSS

To have practiced using CSS

Why use **css**?

To add style to our HTML elements

Common CSS

Let's go over some **common CSS** rules that you will use quite often.

We shall start with **margin** and **padding**.

Margin

Margin refers to the space from the edge of an element to its surrounding elements.

Margin refers to space OUTSIDE the element.

Padding

Padding refers to the space **between the edge of the element and the elements or content inside it.** **Padding** refers to space **INSIDE** the element.

div
